Projects

AUDIOPHILE

Audio devices online store

In this application I was in charge of the layout, status management, application routing and form validation.

REVIEWS APP

Movie and series review application

In this application I was in charge of managing the requests to the TMDB back-end from the back-end developed with Next.JS. At the same time, I developed the review system as well as the users and sessions system.

GALLERIA

Virtual gallery with the most important paintings in the history

In this application I was in charge of the layout of the application, as well as developing the global state of the application that mostly controlled the animations of the application.
